

# Data Protect Compliance integrated with SSE

- Skyhigh Security Secure Web Gateway(SWG)
- Skyhigh Security Cloud Access Security Broker(CASB)
- Skyhigh Security Zero Trust Network Access(ZTNA)

# Necessity of SSE(Security Service Edge) Solution

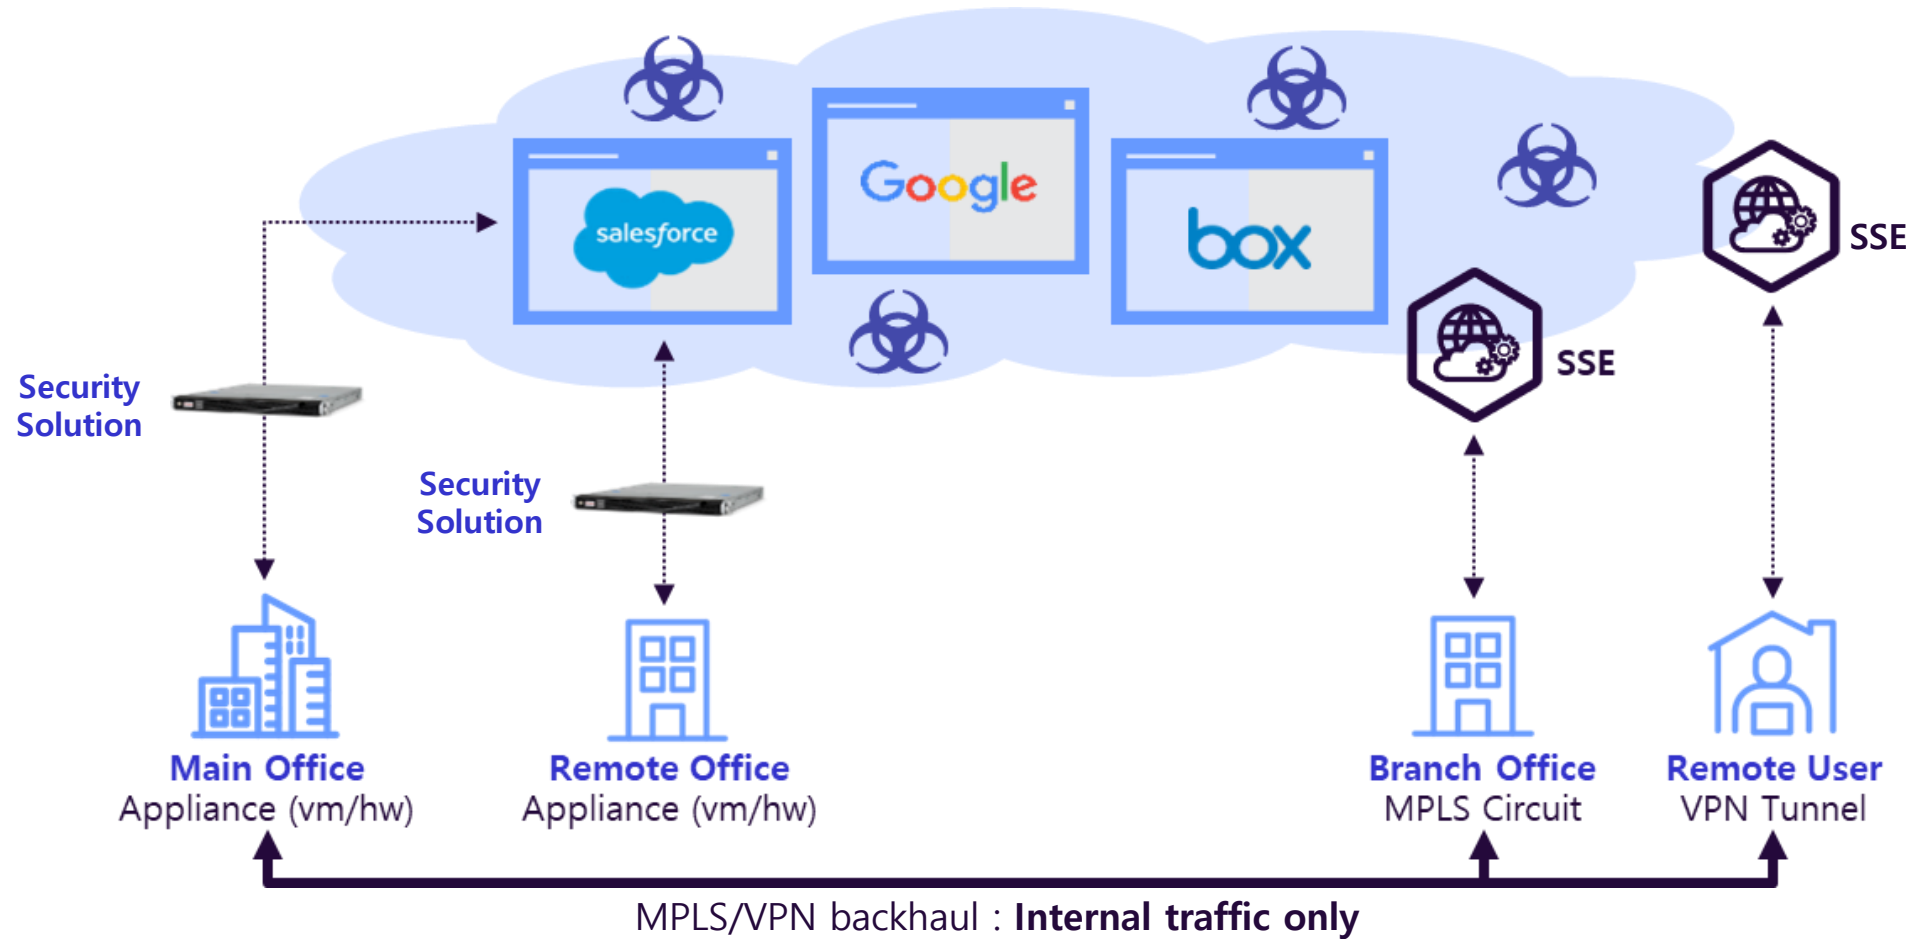

# Inefficient and Costly Architecture – Before

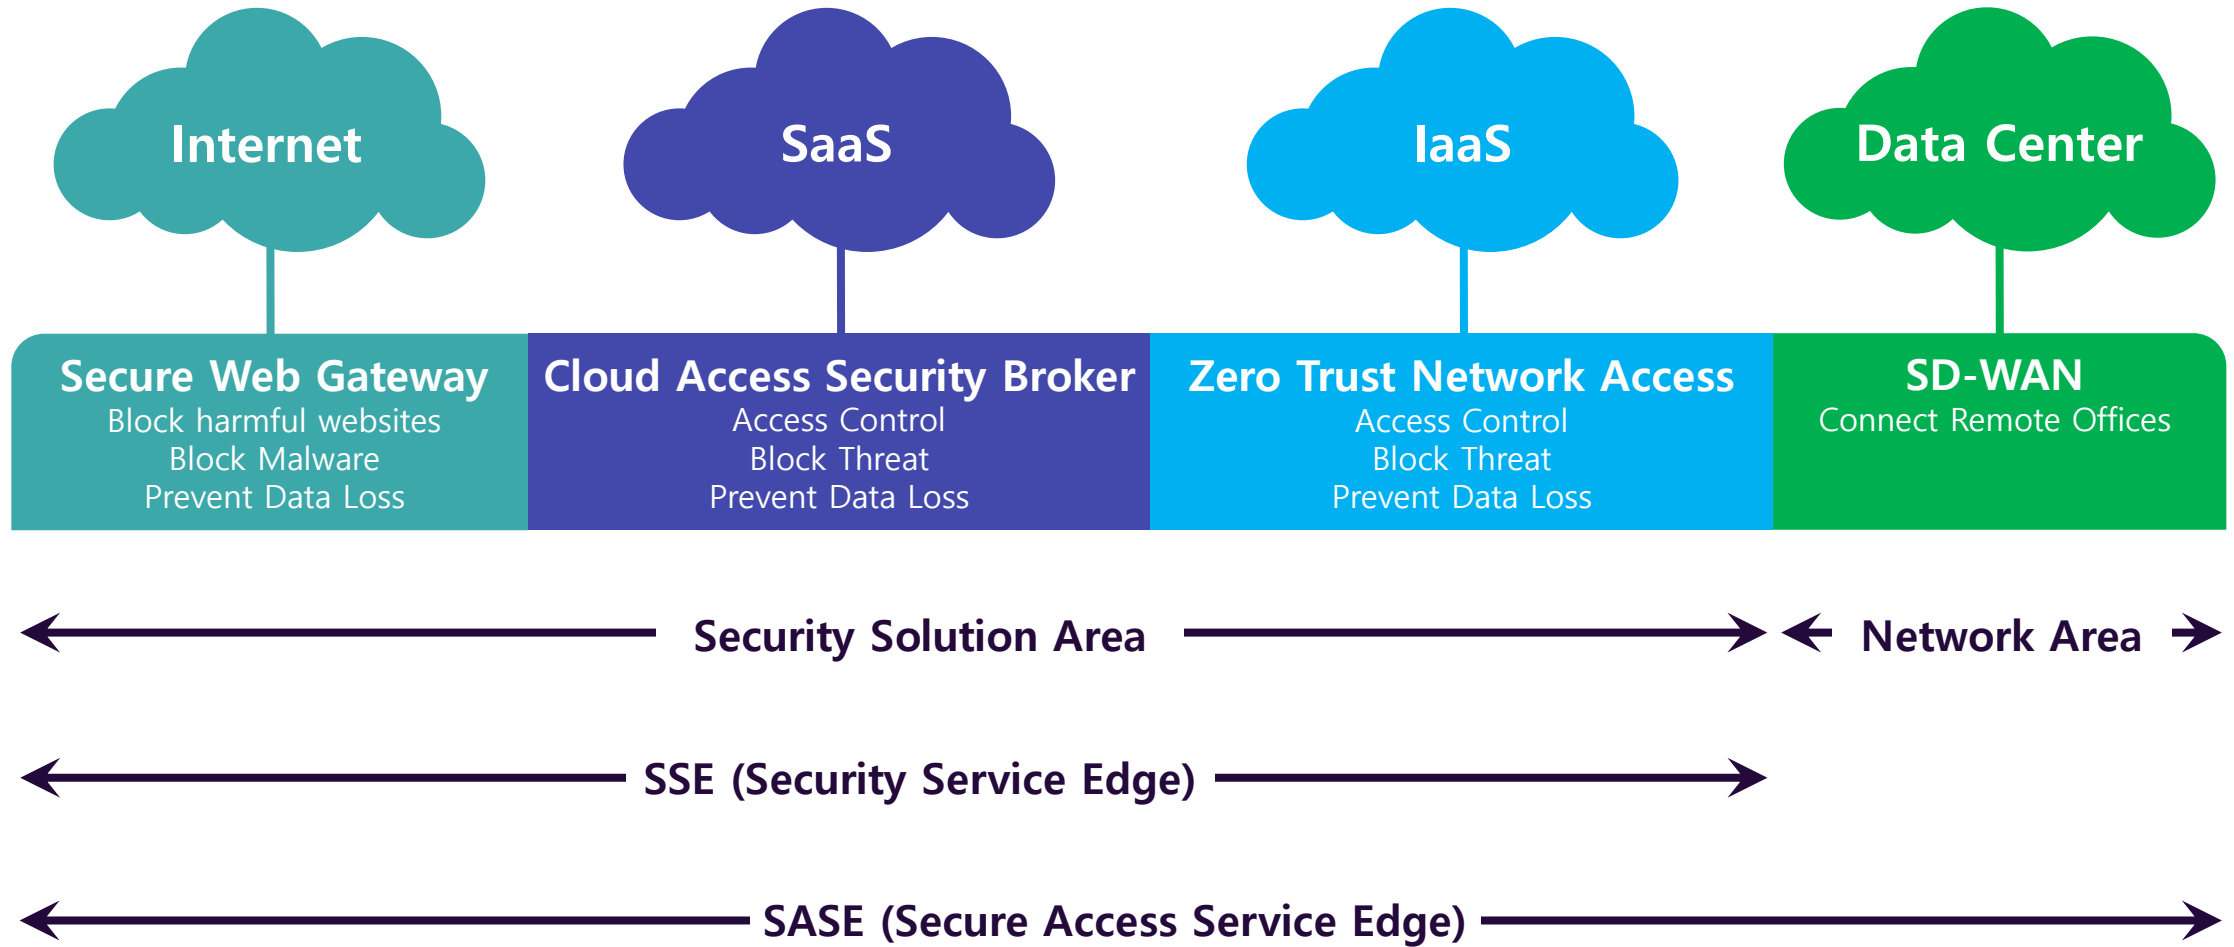

※ Centralize Internet traffic by using VPN to control off-site workers(home, business trip, out on business)  
(Disadvantage : It needs to expand the size of company's line operations, manpower to manage, etc.)

## Route external web traffic through the cloud – After

※ Off-site workers(home, business trip, out on business) can access the Internet through Cloud Gateway anywhere  
(Reduce operations and improve Internet Service quality)

# Gartner's security standards as changing work environments

# Features of Skyhigh Security SSE – SWG (Secure Web Gateway)

## Apply Blacklist/Whitelist based on Category, Web Reputation

The screenshot displays the Skyhigh Security management console. The top navigation bar includes links for Dashboards, Governance, Analytics, Incidents, Policy (selected), Reports, and Custom Apps. The left sidebar shows a 'Web Policy' section with a list of configuration items: Getting Started, Hybrid Policy, SAML Authentication, Global Bypass, Private Access, Global Block, HTTPS Scanning, Common Rules, Web Filtering (selected), Category, Reputa..., Category & Domain..., Content Inspection, and Application Control.

The main content area is titled 'Category, Reputation & Geo' and includes the subtitle 'This rule set blocks content based on categories or site reputation.' Below this, it states 'These rules apply to all traffic' with an 'Edit' link. The configuration is divided into three sections:

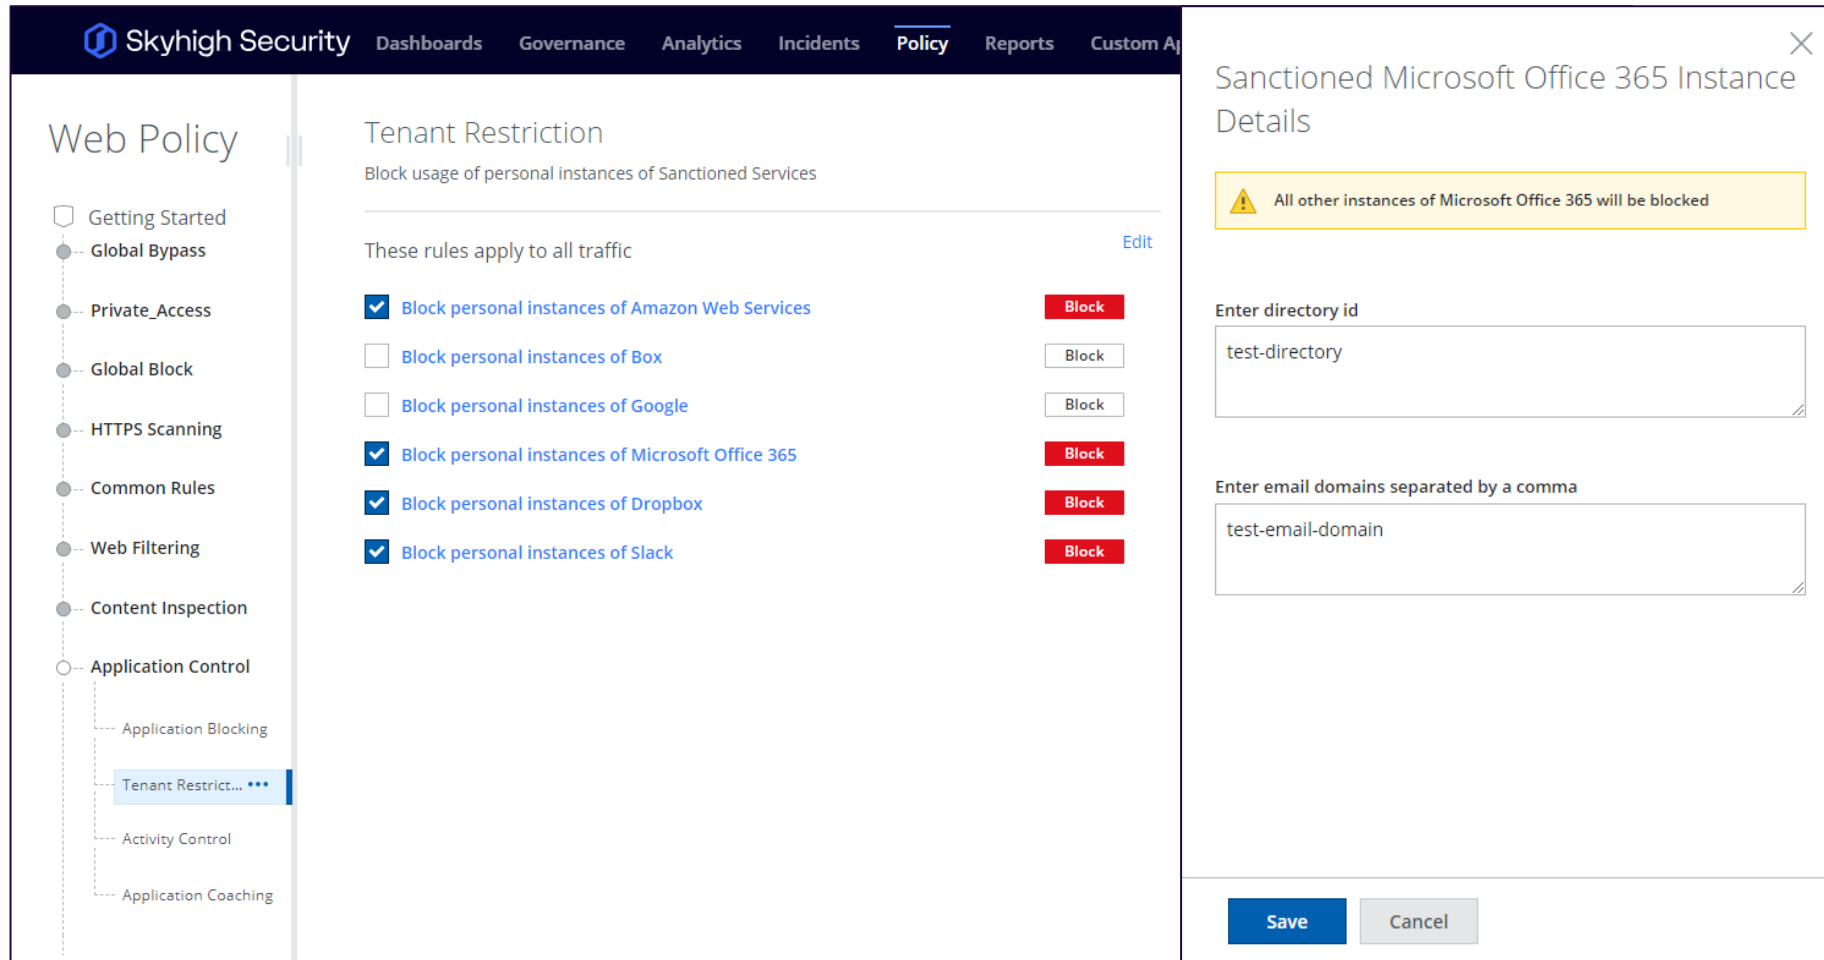

- Skip Web Filtering for these domains, hosts or URLs:** A checkbox is checked, and a 'Skip' button is visible.
- Category:** A checkbox 'Block traffic for these categories' is checked. Below it, a section titled 'What do you want to do with Uncategorized Traffic?' offers three options: 'Allow All' (selected), 'Block All' (with a 'Block' button), and 'Block Only' (with a 'Block' button).
- Reputation:** Two options are shown: 'High Risk' (checked, with a 'Block' button) and 'Medium Risk' (unchecked, with a 'Block' button).

On the right side, a modal window titled 'Blocked URL Categories' is open. It contains the text 'List of categories to block.' and an 'Actions' dropdown menu. Below this is a table with two columns: 'URL Category' and 'Comment'. The table lists the following categories: Gambling, Games, Gambling Related, Streaming Media, Media Downloads, and Media Sharing. At the bottom of the modal are 'Save' and 'Cancel' buttons.

# Features of Skyhigh Security SSE – SWG (Secure Web Gateway)

## Tenant Restriction

The screenshot displays the Skyhigh Security web interface for configuring Tenant Restriction. The top navigation bar includes links for Dashboards, Governance, Analytics, Incidents, Policy (selected), Reports, and Custom Actions. The left sidebar shows a 'Web Policy' menu with options like Getting Started, Global Bypass, Private Access, Global Block, HTTPS Scanning, Common Rules, Web Filtering, Content Inspection, and Application Control. Under Application Control, 'Tenant Restriction' is highlighted. The main content area is titled 'Tenant Restriction' with the subtitle 'Block usage of personal instances of Sanctioned Services'. It states 'These rules apply to all traffic' and lists several rules with checkboxes and 'Block' buttons:

- ☒ Block personal instances of Amazon Web Services [Block]
- ☐ Block personal instances of Box [Block]
- ☐ Block personal instances of Google [Block]
- ☒ Block personal instances of Microsoft Office 365 [Block]
- ☒ Block personal instances of Dropbox [Block]
- ☒ Block personal instances of Slack [Block]

An 'Edit' link is visible next to the rules. A modal window titled 'Sanctioned Microsoft Office 365 Instance Details' is open on the right. It contains a warning message: 'All other instances of Microsoft Office 365 will be blocked'. Below this, there are two input fields: 'Enter directory id' with the value 'test-directory' and 'Enter email domains separated by a comma' with the value 'test-email-domain'. At the bottom of the modal are 'Save' and 'Cancel' buttons.

# Features of Skyhigh Security SSE – SWG (Secure Web Gateway)

## Application Control

The screenshot displays the Skyhigh Security Policy configuration interface. The top navigation bar includes links for Dashboards, Governance, Analytics, Incidents, Policy (selected), Reports, and Custom Apps. The left sidebar shows a hierarchy of settings: Getting Started, SAML Authentication, Global Bypass, HTTPS Scanning, Global Block, Common Rules, Web Filtering, Content Inspection, Application Control (selected), Application Blocking, Tenant Restriction, Activity Control, and Application Coachi... The main content area is titled 'Web Policy' and features an 'Add Service Groups' button. It is divided into two sections: 'Service Category (1)' and 'Individual Services (7)'. The 'Service Category' section shows 'Cloud Storage : Upload' with a 'Block' button. The 'Individual Services' section lists various services with their respective actions and a 'Block' button. A modal window titled 'Select Individual Services' is open on the right, showing a search bar and a list of services with checkboxes. The 'Done' button is at the bottom of the modal.

**Service Category (1)**

- ☒ Cloud Storage : Upload Block

**Individual Services (7)**

- ☐ Notion: Download Upload
- ☐ OpenAI - ChatGPT: Post
- ☒ Facebook: Chat Create event +7 more
- ☒ Google Drive: Post Upload
- ☒ Dropbox: Login Post
- ☒ LinkedIn: Profile organizer Search job +5
- ☒ Instagram: Login Post Upload

## RBI (Remote Browser Isolation)

# Features of Skyhigh Security SSE – SWG (Secure Web Gateway)

## RBI (Remote Browser Isolation)

The screenshot displays the Skyhigh Security web interface. The top navigation bar includes 'Dashboards', 'Governance', 'Analytics', 'Incidents', 'Policy' (selected), 'Reports', and 'Custom Apps'. On the left, the 'Web Policy' sidebar lists various policy areas, with 'Full Isolation' selected under the 'Browser Isolation' section. The main content area is titled 'Full Isolation' and describes the feature: 'Skyhigh Remote Browser Isolation allows users to browse safely to potentially risky websites by providing protection from known and unknown malware. The Full Isolation version of browser isolation provides additional options and flexibility over the Risky Web version for enhanced control of your isolated traffic.'

Below the description, it states 'These rules apply if:' followed by 'User Group is in Isolation User Group' with an 'Edit' link. A section titled 'Items in these lists will skip this rule set' contains a table of rules:

| Rule                                                           | Action |
|----------------------------------------------------------------|--------|
| <input checked="" type="checkbox"/> Domains (Smart Match)      | Skip   |
| <input checked="" type="checkbox"/> Domains (Regex)            | Skip   |
| <input checked="" type="checkbox"/> Destination IP addresses   | Skip   |
| <input checked="" type="checkbox"/> URL categories             | Skip   |
| <input checked="" type="checkbox"/> Reputation risk categories | Skip   |
| <input checked="" type="checkbox"/> Skyhigh recommended        | Skip   |

At the bottom of this section, it says 'Always Isolate'.

On the right, a modal window titled 'Apply Rules If User Group' is open. It has two radio buttons: 'is in' (selected) and 'is not in'. Below is a 'String Lists' section with a list of domains and lists, each with a checkbox. The 'Isolation User Group' checkbox is checked. At the bottom of the modal are 'Save' and 'Cancel' buttons.

Threat protection with SWG capabilities

# Features of Skyhigh Security SSE – SWG (Secure Web Gateway)

- ✓ Test of **Encrypted traffic decryption** and certificate validation
- ✓ Applying policies by user/group through HR system integration
- ✓ Blacklist/Whitelist application based on **category, web reputation**
- ✓ Detailed **application control**, such as Tenant access restrictions, YouTube control, etc.
- ✓ **Control upload/download** through Full-header such as Media Type, Content-Length, and HTTP Method
- ✓ Protect end-user real-time by **Anti-Malware Emulated Sandbox** technology
- ✓ Zero-day defense from Shadow IT
- ✓ Prevent potential threats by utilizing **Web Isolation function(RBI)** against suspicious websites
- ✓ Provides Bypass function based on Destination URL/IP, Port, and Process
